Imaging reveals that the **articular disc demonstrates reducible anterior** displacement. Significant degenerative changes are evident in the osseous structures, with bone erosion observed on the condyle. Examination of the **joint cavity shows no obvious effusion**. During the functional assessment, the patient presents with limited mouth opening.

Our structured method

Structured radiology report

Joint cavity: effusion.

Condyle: bone erosion.

Articular Disc: reducible anterior displacement.

Articular Tubercle: bone erosion.
